 VisioLoc & Eurosatory

Did you miss Eurosatory 2022? Catch up on all the news here!

VisioLoc®: a unique positioning and orientation capability in GNSS-denied environments

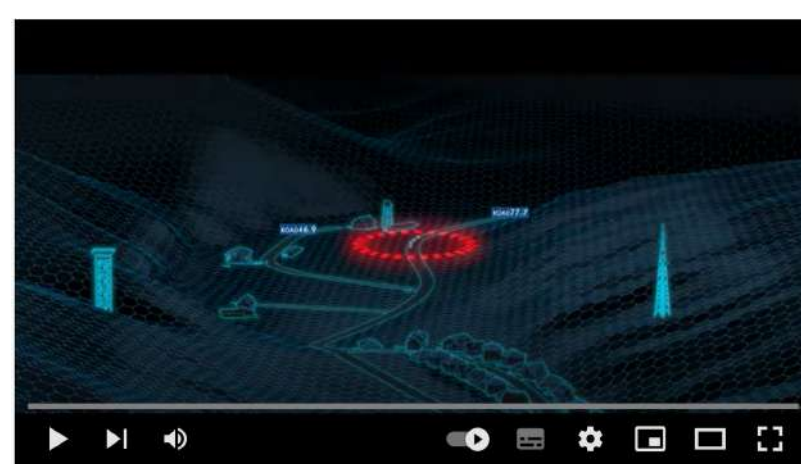

Operating without a reliable satellite connection is a major challenge for operational forces, and a Category I target location error (TLE) capability in GNSS-denied environments can be critical to the success of their missions.

At Eurosatory 2022, Thales launched VisioLoc®, a major innovation for Sophie Optima and Sophie Ultima that allows infantry soldiers, special forces and specialised units to step up to the challenge in hostile environments without affecting the size, weight and performance of their optronic equipment.

Find out the 4 main advantages about VisioLoc

Watch the video of the VisioLoc launch event and discover how it is used in the field with the [Sophie Optima](#) and the [Sophie Ultima](#) hand-held thermal imagers.

Sophie Ultima

As it happened at Eurosatory 2022...

Accelerate the tempo of your operations and get a head start:

Based on the four main pillars of digital technology - connectivity, big data, artificial intelligence and cybersecurity - Thales supports its customers in their digital transformation, enabling armies to stay one step ahead.

1. Force Readiness

Prepare and evaluate your forces and equipment before operational deployment. Ensure availability, readiness and mission success.

2. Mission preparation

Forces are under pressure. Threats are multiform and the complexity of the battlefield challenges the information superiority. Actionable intelligence is essential. How can you transform large and diverse amounts of data on situation intelligence, the enemy and the terrain into a decisive advantage?

3. Command and Control

Sharing, managing and protecting operational information.

4. Combat

The combat zone is a space of direct confrontation between forces where, in a context of high intensity, it is necessary to understand, decide and act faster than the enemy to win.
